# About us

**Metropia** is an incentive-based intelligent traffic management platform that incentivizes commuters, businesses, employers and governmental agencies to work together to obtain improved regional mobility and a better quality of life.

# Project Goal

Reduce congestion and mobile source emissions by activating Metropia Synergy Solution, the no-construction, traffic demand management, Intelligent Transportation System in the El Paso region. Opportunities to integrate the use of Metropia to improve border crossings and encourage transit use will also be identified.

# Project Phases

## Phase 1: Program Planning (Month 1-3)

Goal: Plan for official launch, network and local operations, and stakeholder engagement

Working Metropia Synergy System with basic TMC integration

## Phase 2: Official Launch - Initial Engagement (Month 4-9)

Goal: Launch, engagement and outreach, rapid optimization and program refinement

A robust engineering Metropia Mobile and Synergy system that is ready for a large adoption

## Phase 3: Expanded Adoption (Month 10-End of Project)

Goal: Expand stakeholder involvement, robust services

Scaled and robust operations for a large user base

Federal Share	Metropia Private Sector Infusion	Total Cost
\$1,470,400	\$467,600	\$1,938,000

# Deliverables by Phase

<b>Phase I</b>	Official launch of <b>Metropia Synergy, the Congestion Mitigation Service</b> to the general public
<b>Phase II</b>	(1) A report documenting user adoption, user and system benefit and performance monitor and analysis, and (2) a Windows based, <b>Traffic Management Synergy Operator Console Software</b> allowing an agency to view and monitor traffic condition
<b>Phase III</b>	<b>Evaluation Report and Data</b> with recommendations to improve planning and operations in the region: (1) A final report documenting user adoption, user and system benefit and performance monitor and analysis, (2) link/corridor traffic data (speed/volume) and OD data collected for the project period and a data dictionary description manual

# El Paso Regional Benefits

- Reduce congestion on El Paso road network
- Improved data to help manage capacity throughout the region (increase the efficiency of the existing infrastructure)
- Ability to directly communicate with system user
- Promote local business
- Increase future Border Highway West Express Lane utilization and overall capacity utilization
- Potential to improve air quality
- Identify potential opportunities to enhance border crossing operations and improve the effectiveness of the regional incident management program
- Potential to improve multi-modal choices in the El Paso region (further contributing to improved congestion and air quality)

An aerial view of a city with a mix of green spaces, residential areas, and a dense urban core. A road with a red bus and a yellow car is visible. The text 'Rewards' is in orange, 'Get Points' is in blue, 'to help your' is in blue, and 'City' is in large blue letters. A blue button says 'Trees for All'. A single tree is shown on the right. The text 'Metropia plants a tree for your city' is at the bottom right. A 'Download Metropia' button with a logo is in the top right corner.
